

David Thomsen

Your tasks:

- Enable RDP on mgmt02 if you've not done so already
- Create a named local administrator account if you've not done so already
- Create the DMZ->LAN and LAN->MGMT rules necessary for RDP to connect to mgmt02
- Research how to invoke an SSH connection from traveler to jump such that RDP connections in that tunnel are redirected to mgmt02.

The following screenshot shows an excerpt of what this might look like figure out what the blurry parts are:
