

# SEC 350: Practical Assessment

## General Instructions - **Read First**

- Open internet, open notes, but no open neighbor nor remote support. You are ON YOUR OWN for this submission, so no communications with others during the formal assessment session (In class part).
- Make sure you follow the submission guidelines policy.

💣 There are a very few "on your own" activities in SEC350. This is one of them. Academic Integrity rules apply

## Assessment Grading Policy

- Get in before the end of class - No points off
- Within 24 hours -10%
  - After assessment class, the assessment becomes a heavily weighted and late lab. If you are stuck, reach out to your instructor or a peer.
- Before our next class - 25%
  - At this point the Assessment gets a zero after that
- Look at the rubric to get a sense of weighting of individual assessment components before investing a lot of time on a trouble area.

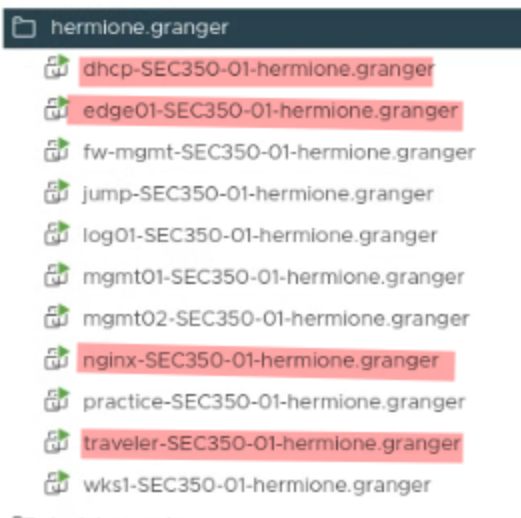

## Hints - Read Second

- You do not need to work serially through this assessment (*though recommended*); it is the end result that matters.
- Make sure to link your firewalls to the appropriate From and To zones.
- Review [network assignments](#). Your new systems will reuse the IP addresses they are replacing.

- Restart any service if you modify a configuration file (network, nginx, dhcp etc...).
- Make sure you include the appropriate vmname label on all deliverables where your name is not obvious in the console.
- Check every VM's network settings to make sure they are moved from SEC350-WAN to the appropriate network segment such as DMZ or LAN.
- Don't forget to look at /var/log/messages on edge01 FW to debug firewall issues.
- The **FW Rule Descriptions are mandatory for rules other than simple established/enabled rules!**

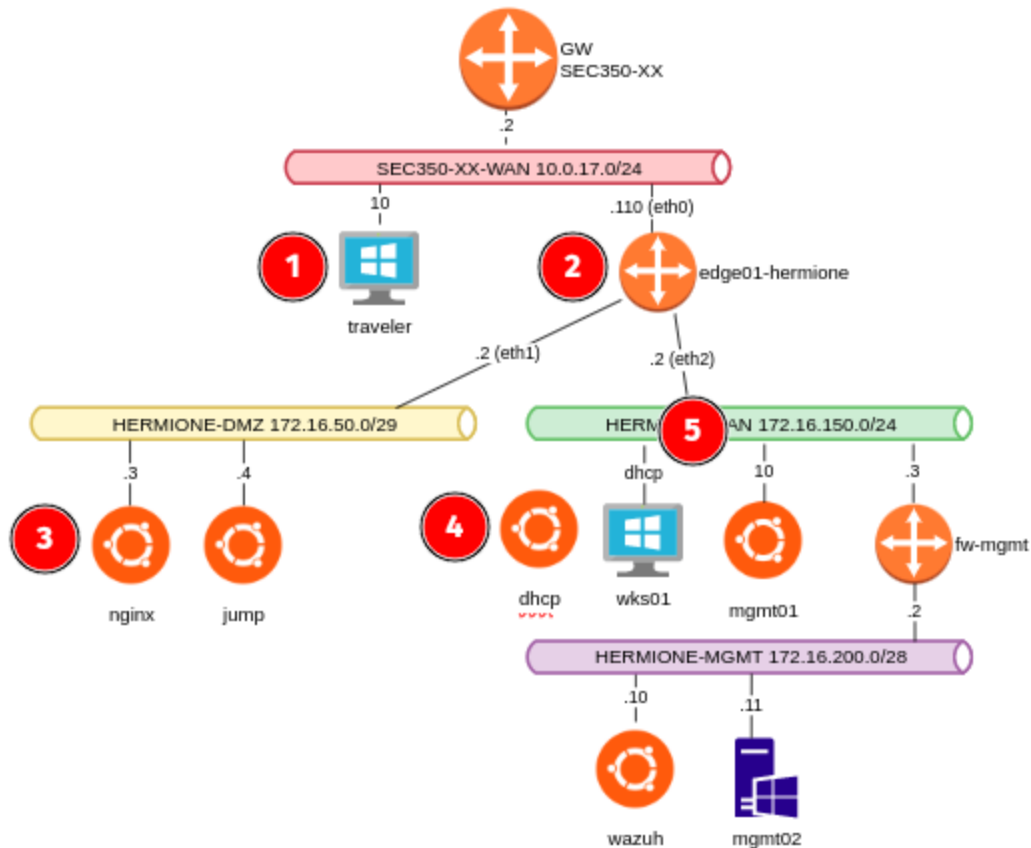

## Your Systems

## New Passwords

System	Type	Username	Password
edge01	Firewall	vyos	Ch@mpl@1n!22
nginx,dhcp	Linux Ubuntu	champuser	Ch@mpl@1n!22
traveler	Windows	champuser	Ch@mpl@1n!22

## Overview

1. RW is gone, reuse that WAN IP address for traveler
2. fw1 is gone, reuse WAN IP for edge01 and configure your DMZ and LAN interfaces just as you did for fw1
3. web01 is history, replace with a new nginx web server using the same IP as web01
4. You have a new ubuntu server that will assign DHCP addresses within the LAN (pick your own IP in the LAN segment)
5. WKS01 should pick up a DHCP address

## Network Assignments

[SEC350-Network-Assignments](#) You will see your new systems in the spreadsheet (likely next to the old ones). Be very careful with your WAN ip addresses (edge01's eth0 interface and travelers interface. Use **your** assigned IP and noone else's.

## edge01 - Network Configuration

Assign the existing two interfaces to WAN and DMZ respectively, add a third interface and assign it to the LAN. On the WAN interface, the upstream gateway and DNS should be assigned to the class gateway: 10.0.17.2

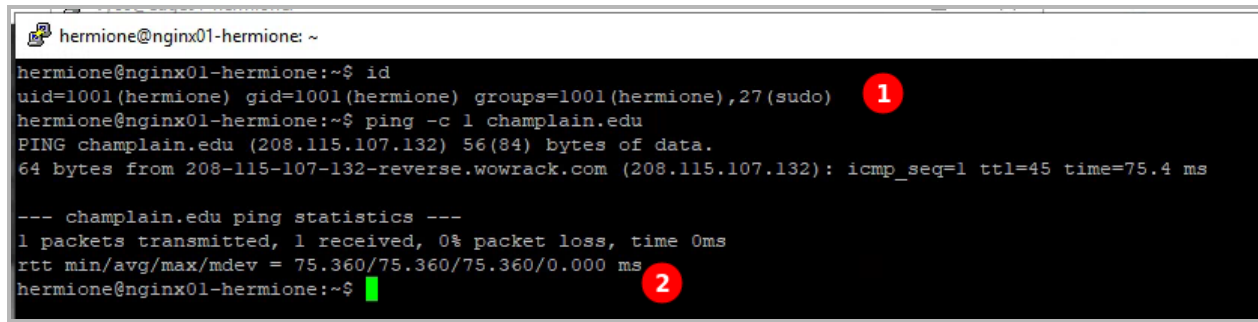

## edge01 routing requirements

- Set your Hostname to edge01-your name
- Configure gateway, dns and all three ip addresses
- Set NAT source rules so that DMZ and LAN hosts are masqueraded by the WAN interface, don't forget to include the MGMT source network
- Forward DNS requests from DMZ and LAN interfaces and their networks. Don't forget to also accept MGMT traffic
- on edge01 Add RIP, advertising the DMZ Network (you may need to restart fw-mgmt for this relationship to work)

## nginx

- Network Segment: SEC350-DMZ
- Set your hostname to nginx-yourname
- Configure networking
- Create a sudo user with your name, and use it instead of champuser, change the default champuser password
- Install and enable nginx, delete the default welcome page, create an index page with your hostname as its content

Deliverable 1. Nginx: Screenshot showing the current user's group (id command) and a successful ping from nginx to champlain.edu similar to the one below. The user should be a member of the sudo group. (Note, this is before your firewall zones are active)

```
hermione@nginx01-hermione: ~  
hermione@nginx01-hermione:~$ id  
uid=1001(hermione) gid=1001(hermione) groups=1001(hermione),27(sudo) 1  
hermione@nginx01-hermione:~$ ping -c 1 champlain.edu  
PING champlain.edu (208.115.107.132) 56(84) bytes of data.  
64 bytes from 208-115-107-132-reverse.wowrack.com (208.115.107.132): icmp_seq=1 ttl=45 time=75.4 ms  
  
--- champlain.edu ping statistics ---  
1 packets transmitted, 1 received, 0% packet loss, time 0ms  
rtt min/avg/max/mdev = 75.360/75.360/75.360/0.000 ms  
hermione@nginx01-hermione:~$ 2
```

## traveler

- Network Segment: SEC350-WAN
- Configure networking with YOUR ip address
- Set the Hostname to traveler-yourname
- Create a Named Administrative User
- This is a WAN system, so make sure the default gateway and DNS point to 10.0.17.2.

## edge01 port forwarding

On edge01, configure port forwarding such that port 80 to edge01's WAN interface will be translated/forwarded to nginx. Make sure you have renamed the computer and are accessing it as a named user.

Deliverable 2. Screenshot demonstrating port forwarding from your eth0 address on edge01 (10.0.17.XX) to nginx from traveler similar to the one below. Also show that your system is named appropriately and that you have a named user.

## nginx wazuh agent

- Figure out how to delete the web01 agent from wazuh manager (it is gone and will be replaced by nginx)
- Install a Wazuh Agent on nginx
- Run the test shown below. SSH to nginx (from another host) Create a failed login attempt followed by a valid one and elevate to root. This is shown in the following screenshot.

Deliverable 3. Screenshot on wazuh that shows an invalid ssh user attempting to login to nginx similar to the one above.

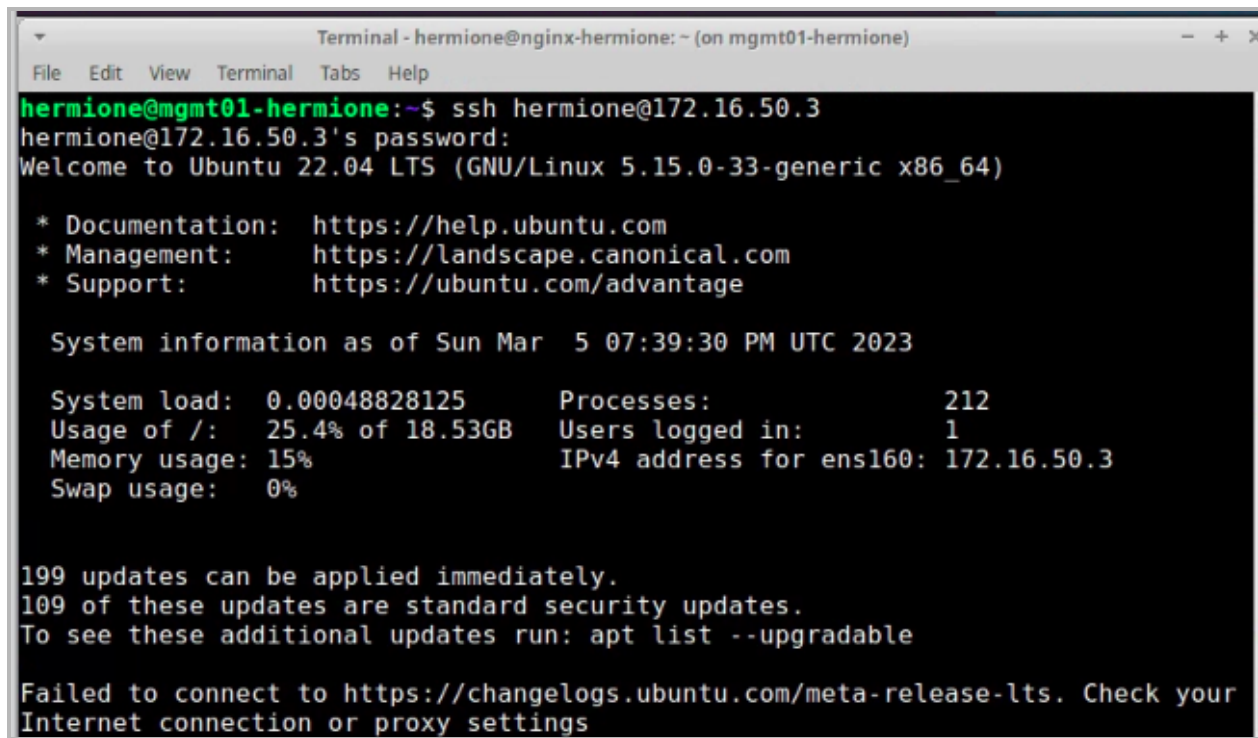

## edge01 Zones and Firewalls

- Create WAN, DMZ and LAN Zones that default drops and logs, and are assigned to the appropriate interfaces
- Create the following firewalls and link them to the appropriate zones. Make sure the default action is drop, and default logging is enabled (this will help you debug).
- Make sure the tests described below work:

Firewall	Requirements	Test
WAN-TO-DMZ	established allowed back WAN can get to nginx on tcp/80 WAN can get to jump on tcp/22	ssh from traveler to jump http from traveler to nginx
DMZ-TO-WAN	established allowed back nginx can ping any host on the WAN (note, this won't work after firewall is up)	ping from nginx to champlain.edu
WAN-TO-LAN	established allowed back	on wks1 browse to a website
LAN-TO-WAN	accept all	on wks1 browse to a website
DMZ-TO-LAN	established allowed back tcp/1514-1515 allowed to wazuh	show a wazuh log event from nginx and jump on wazuh
LAN-TO-DMZ	established allowed back tcp/80 allowed to nginx tcp/22 allowed to all hosts on DMZ from mgmt01	from mgmt101 browse to nginx from mgmt01 ssh into nginx from mgmt01 ssh into jump

Deliverable 4. Screenshot from mgmt01 that shows a ssh session to nginx.

A terminal window titled "Terminal - hermione@nginx-hermione: ~ (on mgmt01-hermione)". The prompt is "hermione@mgmt01-hermione:~\$". The user enters "ssh hermione@172.16.50.3". The terminal shows the SSH connection process, including the password prompt and the Ubuntu 22.04 LTS login banner. The banner includes system information as of Sun Mar 5 07:39:30 PM UTC 2023, system load, usage of /, memory usage, swap usage, processes, users logged in, and IPv4 address for ens160: 172.16.50.3. It also mentions 199 updates can be applied immediately, with 109 being standard security updates. A message at the bottom states "Failed to connect to https://changelogs.ubuntu.com/meta-release-lts. Check your Internet connection or proxy settings".

```
Terminal - hermione@nginx-hermione: ~ (on mgmt01-hermione)
File Edit View Terminal Tabs Help
hermione@mgmt01-hermione:~$ ssh hermione@172.16.50.3
hermione@172.16.50.3's password:
Welcome to Ubuntu 22.04 LTS (GNU/Linux 5.15.0-33-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/advantage

System information as of Sun Mar  5 07:39:30 PM UTC 2023

System load:  0.00048828125      Processes:           212
Usage of /:   25.4% of 18.53GB   Users logged in:    1
Memory usage: 15%               IPv4 address for ens160: 172.16.50.3
Swap usage:   0%

199 updates can be applied immediately.
109 of these updates are standard security updates.
To see these additional updates run: apt list --upgradable

Failed to connect to https://changelogs.ubuntu.com/meta-release-lts. Check your
Internet connection or proxy settings
```

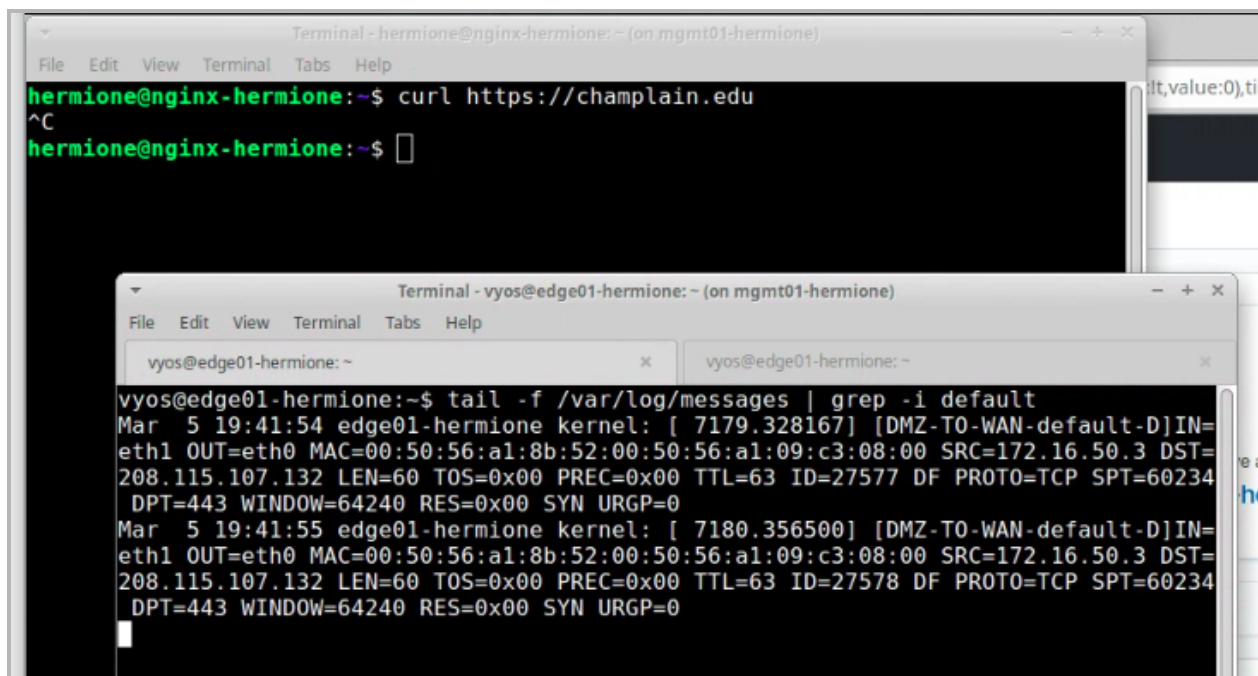

## DMZ to WAN Drop

Nginx is not allowed to surf the internet. From attemptnginx, to curl <https://champlain.edu>

The following test should fail due to firewall restrictions:

nginx->http->champlain.edu

Deliverable 5. Provide a screenshot showing a DMZ-to-WAN drop message where the protocol is TCP, DPT=443 and the Destination is the IP presumably associated with champlain.edu

The image shows two terminal windows. The top window is titled 'Terminal - hermione@nginx-hermione: ~ (on mgmt01-hermione)' and shows the command `curl https://champlain.edu` being executed. The bottom window is titled 'Terminal - vyos@edge01-hermione: ~ (on mgmt01-hermione)' and shows the command `tail -f /var/log/messages | grep -i default` being executed, which displays two lines of kernel log output.

```
hermione@nginx-hermione:~$ curl https://champlain.edu
^C
hermione@nginx-hermione:~$
```

```
vyos@edge01-hermione:~$ tail -f /var/log/messages | grep -i default
Mar  5 19:41:54 edge01-hermione kernel: [ 7179.328167] [DMZ-T0-WAN-default-D]IN=
eth1 OUT=eth0 MAC=00:50:56:a1:8b:52:00:50:56:a1:09:c3:08:00 SRC=172.16.50.3 DST=

DPT=443 WINDOW=64240 RES=0x00 SYN URGP=0
```

## dhcp

Install a DHCP server on the LAN segment, you can choose your own unused IP in the 172.16.150.0/24 range. DHCP options should include

- an IP range of 172.16.150.100-172.16.150.150
- a router of 172.16.150.2
- a dns server of 172.16.150.2

Deliverable 6.

Run the following test on wks01:

- `ipconfig /release`
- `ipconfig /renew`
- `ipconfig /all`

Provide a screenshot similar to the one below that shows your DHCP server information similar to the screenshot below.

```
C:\Users\hermione>ipconfig /renew

Windows IP Configuration

Ethernet adapter Ethernet0:

    Connection-specific DNS Suffix  . : hermione.local
    IPv4 Address. . . . . : 172.16.150.100
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 172.16.150.2

C:\Users\hermione>ipconfig /all

Windows IP Configuration

    Host Name . . . . . : wks1-hermione
    Primary Dns Suffix . . . . . :
    Node Type . . . . . : Hybrid
    IP Routing Enabled. . . . . : No
    WINS Proxy Enabled. . . . . : No
    DNS Suffix Search List. . . . . : hermione.local

Ethernet adapter Ethernet0:

    Connection-specific DNS Suffix  . : hermione.local
    Description . . . . . : Intel(R) 82574L Gigabit Network Connecti
    Physical Address. . . . . : 00-50-56-A1-60-6B
    DHCP Enabled. . . . . : Yes
    Autoconfiguration Enabled . . . . : Yes
    IPv4 Address. . . . . : 172.16.150.100(Preferred)
    Subnet Mask . . . . . : 255.255.255.0
    Lease Obtained. . . . . : Sunday, March 5, 2023 2:44:03 PM
    Lease Expires . . . . . : Sunday, March 5, 2023 2:54:03 PM
    Default Gateway . . . . . : 172.16.150.2
    DHCP Server . . . . . : 172.16.150.5
    DNS Servers . . . . . : 172.16.150.2
    NetBIOS over Tcpip. . . . . : Enabled
```

Deliverable 7. On wazuh, display an agent based security event for dhcp. You should repeat the invalid user test you did earlier.

≡

wazuh. 

/ Modules

dhcp-hermione

/ Security events

## traveler->jump passwordless ssh

Deliverable 8. Demonstrate that you can functionally ssh into jump using an RSA keypair. Note, the passwordless functionality is not heavily weighted.

```
PS C:\Users\hermione> ssh hermione-remote@10.0.17.110
The authenticity of host '10.0.17.110 (10.0.17.110)' can't be established.
ECDSA key fingerprint is SHA256:SkqonNVtCCck1f1DcspSWsBE9QkMjHmdgbU1/9V2zYA.
Are you sure you want to continue connecting (yes/no)? yes
Warning: Permanently added '10.0.17.110' (ECDSA) to the list of known hosts.
Welcome to Ubuntu 22.04 LTS (GNU/Linux 5.15.0-33-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/advantage

System information as of Sun Oct 16 04:23:20 PM UTC 2022

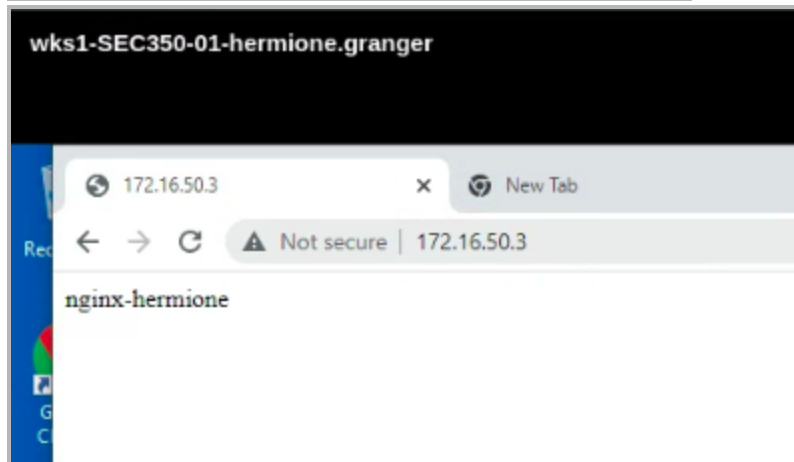

System load:  0.0927734375      Processes:            235
Usage of /:   25.1% of 18.53GB   Users logged in:     3
Memory usage: 17%              IPv4 address for ens160: 172.16.50.4
Swap usage:   0%

0 updates can be applied immediately.

The list of available updates is more than a week old.
To check for new updates run: sudo apt update

Last login: Thu Sep 29 12:30:14 2022 from 10.0.17.10
hermione-remote@jump-hermione: $
```

Deliverable 9. Demonstrate that wks01 can browse to nginx. Provide a screenshot similar to the one below.

Deliverable 10. Provide a link to your edge01 configuration on github. Your firewall will be evaluated for correctness and

thoroughness. Your firewall should be formatted as plaintext using the vyos configuration routine shown below. This is the only github requirement.

```
show configuration commands | grep -v "syslog  
global\|ntp\|login\|console\|config\|hw-id\|loopback\|conntrack"
```
